CatDV Worker makes media workflow automation, media logistics and integrations a breeze.

**Easy things are easy, hard things are possible**

CatDV Worker automates media workflows without needing costly and time consuming development effort. At the same time it provides many tools for developers and integrators to extend Worker's capabilities.

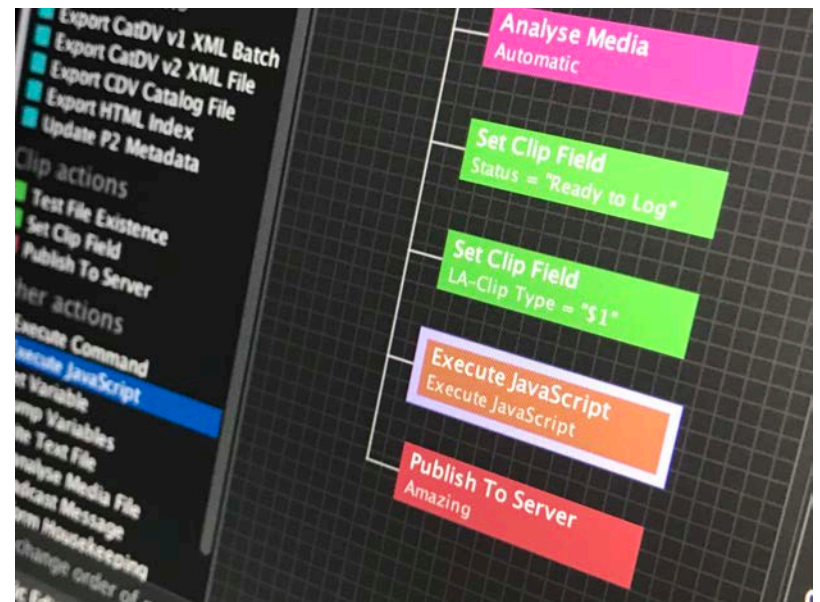

The Worker offers a point and click interface for deploying powerful workflows.

**Capabilities**

CatDV Worker includes a number of capabilities that open a wide range of sophisticated workflows; for power users, integrators and via CatDV Professional Services.

These include:

- ingest content
- create proxies
- watch folders
- reliably move and copy content
- native, camera card support
- transcode to and from a variety of media formats
- integrate with other transcoders
- integrate with other, third party systems
- timed and scheduled actions
- actions triggered from CatDV metadata
- harvest and expand metadata from file and folder names
- mac, windows and linux support
- share metadata with other CatDV systems
- flexible user interface: filtering task lists, periodically updating status etc.
- actions can be imported and exported

CatDV Professional Services also offer a range of cost effective, fixed price automations, integrations and workflows using the Worker. Contact [proservices@squarebox.com](mailto:proservices@squarebox.com) for more information.
